Gardasil: NHS Consent Form

Name :

Date of Birth:

I hereby consent to the administration of Gardasil.

I understand that:

The vaccine is given as 3 injections, the second 2-3 months and the third 6-7 months after the first vaccination. Booster doses may be necessary in 5 or 10 years time to maintain immunity for those HPV types contained within this vaccine, but this has not yet been confirmed.

As with most vaccines, side effects are unusual but can include pyrexia and soreness or mild inflammation at the injection site. Rarely, allergic reactions and joint pains have been described following the vaccine, and very rarely signs of asthma have been seen.

Despite having this vaccine, girls will continue to require cervical smears from age 25 for the foreseeable future under the National Cervical Smear Programme.
